SEAON - ERP DASHBORAD REQUIREMENTS

==========

BUSINESS MODULES

==========

1. SUPER ADMIN SYSTEM (VERY IMPORTANT)

Build a Super Admin Dashboard that can:

- Create organizations / companies (optional future-ready)
- Create users
- Create custom roles
- Assign permissions module-wise
- Create role-based dashboards
- Manage menus visible for each role
- Control access to pages, buttons, reports, actions
- View full audit logs

Default roles:
- Super Admin
- Admin
- Sales
- Production Manager
- Warehouse Manager
- Inventory Manager
- Accounts
- Customer Support

Need dynamic permission system like:

Users can:
- View Orders
- Create Orders
- Approve Orders
- Start Production
- Update Inventory
- Manage Returns
- View Reports
- Manage Users

==========

2. UI / UX REQUIREMENTS

==========

Design should be:
- Extremely easy to use
- Clean
- Fast
- Industrial dashboard style
- Highly practical
- Mobile + tablet responsive

Use Cards View wherever possible.

Use:
- KPI cards
- Order cards
- Product cards
- Return request cards
- Low stock cards
- Workflow cards

Use modern SaaS style UI inspired by:
- Stripe
- Linear
- Notion
- Monday.com

Need:
- Sidebar
- Search
- Filters
- Quick actions
- Dark/light mode optional

==========

3. ORDER MANAGEMENT SYSTEM

==========

Need TWO ORDER FLOWS:

A. MANUFACTURED ORDER FLOW

Client Order →
Production →
Finished Goods →
Warehouse →
Dispatch →
Delivered

B. READYMADE / TRADING ORDER FLOW

Vendor Purchase →
Warehouse Receive →
Dispatch to Client →
Delivered

System must support selecting order type:

- Manufactured
- Readymade

Each order should track timeline.

Statuses:

Manufactured:
Created
Approved
In Production
Produced

Moved to Warehouse
Dispatched
Delivered

Readymade:
Created
Vendor Ordered
Received in Warehouse
Packed
Dispatched
Delivered

==========

4. RETURNS MANAGEMENT SYSTEM

==========

Need Returned Products Tracking.

Flow:

Delivered →
Return Requested →
Return Received →
Issue Inspection →
Repair / Rework →
Production Fix →
Ready Again →
Delivered Again

Need:
- Return reason
- Photos upload
- Damage notes
- Responsible department
- Replacement or repair mode
- Re-dispatch tracking

==========

5. PRODUCT TYPES

==========

Need support for:

- Raw Materials
- Semi Finished Products
- Finished Products

Examples:

Raw Material:
Glue, Film Roll, Paper Core

Semi Finished:
Half coated roll, slit roll, printed roll

Finished:
Retail tape box, jumbo roll ready dispatch

==========

6. BOM / MATERIAL MAPPING SYSTEM (ADVANCED)

==========

Need mapping of raw materials to:

A. Finished Products
B. Semi Finished Products

When creating order system must check BOTH possible paths.

Example:

Finished Product A can be produced by:

Path 1:
Raw Material → Finished Product

OR

Path 2:
Raw Material → Semi Finished Product → Finished Product

System should calculate best possible production path.

Need:
- Material requirement engine
- Availability engine
- Alternative production route logic
- Suggest fastest possible route

==========
7. SMART ORDER CREATION ENGINE
==========

When user creates order:

Select:
- Product
- Quantity
- Order Type

System should check:

- Ready stock available?
- Semi-finished stock available?
- Raw material available?
- Can manufacture directly?
- Can manufacture using semi-finished?
- Estimated completion time

Then recommend:

- Dispatch from ready stock
- Manufacture now
- Use semi-finished route
- Partial dispatch possible

==========

8. INVENTORY MANAGEMENT SYSTEM

==========

Need ledger-based inventory.

Never overwrite stock directly.

Track:

- Raw materials
- Semi finished
- Finished goods
- Warehouse stock
- Damaged stock
- Reserved stock
- Returned stock

Need stock cards and reports.

==========

9. FIFO RAW MATERIAL LOGIC (VERY IMPORTANT)

==========

Need FIFO inventory usage.

When production consumes raw material:

System should use OLDEST stock first.

Need batch tracking:

Fields:
- Batch ID
- Received date
- Vendor
- Quantity
- Expiry date (optional)
- Remaining qty

When consuming:

Use oldest available batch first.

Need alerts:

- Dead stock
- Near expiry
- Non-moving stock

Need reports:

- FIFO consumption history
- Batch aging report

==========

10. PRODUCTION SYSTEM

==========

Need production module:

- Production queue
- Work orders
- Material allocation
- Batch consumption
- Output creation
- Quality check
- Move to warehouse

==========

11. WAREHOUSE MANAGEMENT

==========

Need:

- Inward stock
- Putaway
- Picking
- Packing

- Dispatch
- Return receive

==========
12. INVENTORY UPDATE ALERTS
==========

If NO stock updates happened in current week:

Every Saturday send email notification:

"This week no inventory/product stock updates were recorded."

Need automated scheduler / cron job.

Check:
- No inward
- No outward
- No adjustments

Send to:
- Admin
- Super Admin
- Inventory Manager

==========
13. NOTIFICATIONS SYSTEM
==========

Use:

- WhatsApp Cloud API
- Email

Trigger notifications for:

Orders:

- Created
- Approved
- In Production
- Dispatched
- Delivered

Returns:
- Return received
- Replacement dispatched

Inventory:
- Low stock
- Dead stock
- Weekly no-update alert

Need queue system with retry logic.

==========

14. DASHBOARDS (ROLE BASED)

==========

Super Admin Dashboard:
- All metrics
- User management
- Role management
- System health

Sales Dashboard:
- Orders
- Dispatch status
- Customer updates

Production Dashboard:
- Work orders
- Material shortages
- Queue

Warehouse Dashboard:
- Ready stock
- Dispatch queue

- Returns inward

Inventory Dashboard:
- Stock aging
- FIFO batches
- Low stock

Management Dashboard:
- Revenue
- Orders
- Delays
- Returns %
